CHURCH ACTIVITIES

UNIVERSALIST CHURCH. The subject of the evening meeting at the Universalist Church next Sunday will be, "Church Extension, Our Obli-

gation to Spread the Gospel of Good Rev. Mr. Little will have for the morning service next Sunday, ... A Just Retribution for Sin. !!

The Halloweten Party at the Universalist Chapel will be held Nov. 4th.

METHODIST CHURCH.

The annual Harvest Fair and Supper at the Methodist church last Thursday attracted a large attendance, above 130 partaking of the bountiful support propared by the Ladles' Aid. In the yestry tables were arranged for the sale of fancy articles and aprons, 5c and 10c notions and plants, fruit and vegetables, and ice croum. Miss Minnie Capen,

Lizzie Annas were in charge of these The Loyal Workers and the Young Men's Christian League will hold their Hallowe'en party, Friday evening, Oct.

Mrs. Lillian Stowell, Mrs. Mae R.

Bartlett, Mrs. E. M. Burbank and Mrs.

Those who attended the Girls' Conference in Saco last week as delegates from the Methodist church were: Miss Minnie Wilson and Miss Naomi Smith.

CONGREGATIONAL CHURCH.

Secretary Arthur W. Bailey of South Hadley, Mass., delivered a very interesting sermon last Sunday on "The Worth of a Man." He said it is man's spiritual nature that gives him his great worth, and it is the part of wisdom to spare no pains or cost in cultivating and devoting the spiritual nature, There was a good attendance and the Bethel for luncheon on Monday. singing by the chorus choir was much

Bailey was interesting and profitable. bridge, Mass, spent a couple of days The subject of the morning sermon very pleasantly at the Inn last week. next Sunday will be, "Soma Lessons of

rards of Religion."

Those who attended the Girls! Con-winter here. terence in Saco last week as delegates from the Congregational church were: Mrs. W. C. Curtis, Miss Alice Brown ton on Saturday, bringing with him and Miss Knthryn Hunscom.

Nursery stock may be attacked by termites if planted on recently cleared land. Such locations, therefore, should be avoided. Care should be taken not to permit the roots of the young trees to dry out before planting, as such weakened stock is liable, to attack. Pamage to field crops by termites may be prevented by late fall plowing and crop rotation.

PLANTING ROSES.

Under Payorable Climatic Conditions Dormant Plants Should Bc Set Out in the Fau.

In deciding the time to plant roses, my specialists of the department, the zardence must take into consideration the kind of plant, tho location, and to a ertain extent, the reason. The roses may be obtained either as downant or potted plants. It is best to use the former and plant in the fall in these sections where the temperature does not fall below 10 degrees E. where the winter winds are not exceptionally drying, and where the soil has been so propared that it does not beave badly. In other places spring planting with potted plants is best. Methods of compating termites, or

All floors are of concrete, and the chance for gettling clear after being locked into the steel cells, is very remote. The police department is the first of the Municipal Departments to occupy the new building, which has been under construction for the past year. It is expected that the Belecknon's, Clerk's and Treasurer's offices will be ready for occupancy about November 10th. Dr. B. A. Swatey was the first percepant to stay overnight in the new cells. He was wanted at Parls for this fall term

SHALL ROAD BUILDING STOP?

Shall road-building stop in Maine after next January 1 It will unless the incoming legislature provides more money, for the \$2,000,000 bond issue is practically exhausted.

Since the first of the bonds were issued—some four years ago—the automobilists have paid into the state treesury nearly \$1,000,000 or one-half enough to retire the entire issue. Next year they will contribute more than \$400,-Mr. Buxton says: "My kidneys had 000 but under the law none of it can be used for new construction. Certainfered a great deal from pains across by the motorists are doing their part, and it surely seems but fair that the state should do its part by providing at least an equal amount.

The most equitable way would appear to be by a mill tax, the same methand I was led to try them. The results od as is employed in raising our school money. A tax of one mill on the dollar would provide about \$500,000 each year. Other states are expending millions for roads and Mains cannot afford to fall too far behind.

A good start has been made and it would be almost a crime to stop now. One important feature of a mill tax, so aptly stated by Governor-cleet Milliken before the State-wide Good Roads Com- guests at H. G. Brown's. mittee, would be that it would provide t yearly fund to be expended over a series of years and those having the charge of road construction would know exactly what they could count on each year,

STORING CORN CROP.

Store Grain in Thoroughly Ventilated Moisture-Proof Cribs-Protect Stov er from Weather.

Whether corn stover is shredded or not. It is of great importance that it be well stored and not left long exposed to the weather. The mistake is some times made of placing the hay crop in shods and barns and leaving the corn stover in shocks in the field. The reverse is better, inasmuch as most kinds of hay will not depreciate so rapidly in feeding value and will keep better in stacks and ricks than corn stover. Unless placed under cover corn stover should be fed in the fall and early winter. If left exposed until February or March it has little feeding value.

In the principal corn-producing States the autumns are usually dry, and corn fodder dries thoroughly in the shocks and is shredded and stored in barns or foed sheds with little danger of heating or molding. The fodder should not be wet when shredded and stored, but damp days are preferable for doing the hauling and shredding because the blades are more pliable and the folder is therefore handled especially in northern States, where the corn is full of sap when cut, and where damp fall weather prevails, much care is necessary in storing corn folder or stover to prevent heating and molding. In such localities it should be placed under cover in ricks not more than 6 or 8 feet in thicknesses, or, if shredded, layers of dry straw several inches deep should alternate with lays ers of the shredded stover. The depth of the layers of stover can vary from several inches to a foot or more, according to its dryness when stored. The dry straw will take up some of the moisture from the stover and prevent heating.

There was a time in the history of the corn-producing belt when rail pens were about the only available means. of storing the corn crop. Much to the For the heart must speak when the discredit of some corn growers this method of storing is still in vogue, avon in sections where good means of Together they followed the cattle storage could be afforded at little expense. It is no uncommon sight to see rail pen after rall pen filled with care of corn and without any cover, exposed to all the rains and anows of winter. and these in sections of the country that produce the most corn and are consequently most interested in higherpriced corn. This corn remains in apparently good condition during the cold weather and is usually placed upon the market in early spring. Filled with water, it is not long after it is loaded into hox cars or vessels until it heats

SCALY LEG OR SCABIES.

By G. E. Conkey.

Scab parasites sometimes cause a diseased condition of the legs and toes in fowls the trouble being usually referred to as scaly leg. The affection is easily recognized by the enlarged, roughoused or crusty appearance of the legs and feet, and when once discovered stops should at once be taken to prevent its preading through the flock.

Scaly Leg is present more or less in all flocks, unless special attention has been given to exclude it. The mifes which cause it to pass from one fowl to snother and naturally both legs of the fowl will be affected and to about the ame extent. Many farm flocks are endered very unsightly because scaly

SYMPTOMS.

In the early stages of the disease the gracial health of the fowl does not appear to be affected but later there may be considerable irritation, causing the bird to pick at the affected parts and to become restless. As the disease progresses the accumulation of scale about the bock joint may cause lameness, or he diseased feet will make it difficult for the bird to move about. While

In Oxford County the falling off is In cases where bluebirds, wrens or other even more noticeable than in Kennebec er birds that are desired by those who necessarily caused by the tubercle bacil. in 1914. From Buckfield there were it have traveled nearly 4,000 miles shipped but 1.315 barrels in 1915 this Summer, " says Col. Shields, "have against 22,072 barrels in 1914. North visited more than 50 towns in the Milis tubercular, he really indicates that Jay, in Franklin County, however, die West and in the East, have walked shipments from which were not given more than 100 miles, and though I alfesting itself by tubercles or little separately in the 1914 statistics, ways look carefully for birds, have not

> The 1915 crop was considerably bluebird is, perhaps, the most modest smaller than that of 1014 but the great and most inoffensive of all our native difference in shipments was by no songsters, and so it has retired more means entirely due to the difference in generally before the onslaughts of the crop. High freight rates across the British intruder than any other of our water, affecting especially the Bon native birds, though all have been driv-Davis crop, and unsatisfactory prices on out to a greater or less extent. played an important part in the matter. It I recently sent out 30 letters, inclo-State Horticulturist Wilkins states ing self-addressed post cards, asking my that there are indications that the 1916 correspondents whether they have seen apple crop will be 50 per cent greater any bluebirds, and, if so, how many. than that of last year, although not The cards have all been returned, and equal to the bumper crop of 1914 in only six of the people have seen a single size. The quality of this year's crop, bluebird. Some of them report about however, will not be very good, on ac- the usual number, but the experience count of the damage by hall, fungus and observation of the others agree disease and inseats.

PLAN TO WIPE OUT ENGLISH SPARROW.

League of American Sportsmen Urges birds. Will Eplist All Governors and conquerent on appear result most of the Places Have Already Succeeded in sparrows in that city have been killed Mayors. Ban Diego, Cal., and Other Driving Out the Pests.

1010.

The Lengue of American Sportsmen whose object is the preservation of wild life, is considering the question of inaugurating a nation-wide campaign for the destruction of the English sparrow. Its officers say this bird has made of useful and beautiful birds that used ber of good people by such a crusade, ber of good people by such a crusade, to inhabit cities, farms and countryside all over the land.

The league intends to ask the Governor of each state to Issue a proclamation declaring war on the English sparrow and solling aside a week, possibly in April or May of next year, to be doroted capculally to destroying nests of this perdelous pest. Printed Instructions as to the plan of the campaign will
